ALTERNATIVE PRODUCTS: 2 isoforms; A (shown here) and B; are ALTERNATIVE PRODUCTS: 2 isoforms; A (shown here) and B; are produced by alternative initiation. A third isoform: C is produced by alternative splicing.

PRODUCED BY ALTERNATIVE EMBRYO, EXPRESSED AT HIGH LEVELS IN TISSUE SPECIFICITY: IN THE EMBRYO, EXPRESSED AT HIGHLY EXPRESSED IN DEVELOPING BRAIN AND NEURAL TUBE. IN ADULT, HIGHLY EXPRESSED IN DEVELOPING BRAIN AND NEURAL TOWN IN TESTIS, HEART AND THYMUS.

BRAIN WITH VERY LOW LEVELS FOUND IN TESTIS, HEART AND THYMUS.

ISOFORM C IS EXPRESSED ONLY IN THE EMBRYO.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  hitted (JUN-1996) to the EMBL/GenBank/DDBJ databases. FUNCTION: IMPLICATED AS A TUMOR SUPPRESSOR GENE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     DEVELOPMENTAL STAGE: LOW LEVELS IN EARLY GESTATION. HIGHEST LEVELS EXPRESSED DURING MID GESTATION. LEVELS DECREASE IN LATE GESTATION AND REMAIN AT THIS LEVEL IN THE ADULT.
SIMILARITY: BELONGS TO THE IMMUNOGLOBULIN SUPERFAMILY. DCC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      SIMILARITY: CONTAINS 4 IMMUNOGLOBULIN-LIKE C2-TYPE DOMAINS. FUNCTION: MAY BE INVOLVED AS A REGULATORY PROTEIN IN THE TRANSITION OF UNDIFFERENTIATED PROLIFERATING CELLS TO THEIR TRANSITION OF UNDIFFERENTIATED STATE. MAY ALSO FUNCTION AS A CELL ADHESION DIFFERENTIATED STATE. MAY ALSO FUNCTION AND ADULT TISSUES.

-!- SUBCELLULAR LOCATION: Type I membrane protein.

-!- SUBCELLULAR LOCATION: Type I membrane protein.

-!- ALIERNATIVE PRODUCTS: AT LEAST 2 ISOFORMS; 1 (SHOWN HERE) AND ARE PRODUCED BY ALIERNATIVE SPLICING.

ARE PRODUCED BY ALIERNATIVE SPLICING.

-!- TISSUE SPECIFICITY: WIDELY EXPRESSED AND ALSO IN CANCER CELL

Description

19;

pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Issued_Patents_AA:*
